

Retaining Walls

Whether your project calls for a concave, convex or circular wall, our system can meet your need. Depending on soil conditions, this system can tower up to 40 feet. It can match most any test it's put to.

The Stone Strong® system looks good too! Whether imitating the look of natural chiseled stone or rough hewn natural stone of any color, our system deliver a quality aesthetic that pleases the most discriminating owner.

The 24 SF Block contributes to the speed of installation. A small crew and a couple of pieces of equipment can install 1,200 sf a day.

The TopBlock has an 8" recess at the top of the face to allow for multiple finish options.

The 6SF Block allows for tighter turning radius, wall steps at 18" increments and vertical and horizontal adjustments. The Block can also be used as a stand alone retaining wall.

The 3SF Block allows the wall to stay on running bond.

The End/Corner Block is used for 90° turns and for end finish treatments.

The addition of the extender to the 24SF block provides gravity wall heights.

The Dual Face Block provides for above grade applications.

The 90° Block provides for inside and outside 90° turns.

The 45° Block provides for inside and outside 45° turns.

The Step/Cap is used for stair and step applications and as wall cap.
